Kinston, the right place ... Kinston Public Services, the right choice.

Kinston All-America City 2009

January 14, 2022

Dear City of Kinston Water Customer:

Beginning March 7, 2022 and continuing until approximately April 11, 2022, the City of Kinston will temporarily change the disinfectant used in the water treatment process from chloramines to chlorine. This is being done in coordination with the Neuse Regional Water and Sewer Authority and the other member utilities.

Since March 2009, NRWASA and its members, including the City of Kinston, have used chloramines, which is a mixture of chlorine and ammonia, as the disinfectant in the water treatment process. Chloramines are an effective disinfectant and also reduce the level of byproducts that are regulated by the United States Environmental Protection Agency. State drinking water guidelines recommend that water systems using chloramines periodically switch back to free chlorine for a minimum of four consecutive weeks. This brief scheduled change in disinfectant is a standard water treatment practice to keep water mains clean and free of potentially harmful bacteria throughout the year.

During the temporary switch to free chlorine, customers may notice a slight change in the taste or smell of their tap water. The mild chlorine taste and smell is normal and poses no health risk. Most customers will not need to take any precautions as the water remains safe to drink and is treated according to both state and federal standards. People and businesses that normally take special precautions to remove chloramines from tap water, such as dialysis centers, medical facilities and aquatic pet owners, should continue to take the same precautions during the temporary switch from chloramines to free chlorine.

If you have any questions or concerns, please contact the Kinston Public Services Customer Service Center at 252-939-3282. Updates and more information will be available on our webpage, www.kinstonpublicservices.com.
